Professional Summary:

Software Engineer with experience building secure, scalable full-stack applications and enterprise authentication solutions. Skilled in Java, JavaScript, React, Next.js, Node.js, REST APIs, AWS, and Identity & Access Management (IAM). Experienced in developing production-ready features, authentication systems, and cloud integrations across frontend and backend applications.

Professional Experience:

Software Engineer

miniOrange Security Software Pvt. Ltd. | Pune, India

Aug 2024 – Present

(Internship converted to full-time in Feb 2025)

- Built and published reusable OAuth 2.0 and Single Sign-On (SSO) authentication libraries for PHP, JavaScript, Android, Java, Python, and Ruby across Composer, npm, Maven, and JitPack, with PHP and JavaScript connectors reaching 900+ and 500+ downloads, respectively.
 - Contributed to the core Xecurify IAM platform through feature development, production bug fixes, customer-specific enhancements, and on-premise deployments, troubleshooting issues across customer environments to improve system stability, performance, and security workflows.
 - Designed and implemented security enhancements, including OIDC certificate rotation for seamless signing key rollover and WhatsApp-based One-Time Password (OTP) Multi-Factor Authentication (MFA), strengthening authentication security without service disruption.
 - Engineered an AWS Marketplace onboarding gateway using Next.js, AWS Lambda, and Amazon SQS, integrating frontend, backend, REST APIs, and cloud services to automate customer onboarding and provisioning into the IAM platform.
-

Projects:

Highway Alerts – Hands-Free Location Explorer - [Link](#)

Feb 2024 – Apr 2024

Technologies: React, Node.js, Express.js, MongoDB, Google Maps API

- Built a MERN-based application enabling voice-based location discovery using Google Maps and Places APIs for hands-free navigation.
- Developed backend services, implemented user authentication, and deployed the application using Netlify and Render.

AI-Powered Code Editor - [Link](#)

Aug 2023 – Oct 2023

Technologies: React, JavaScript, Firebase, OpenAI Codex API

- Developed an AI-powered online code editor using React and the OpenAI Codex API for intelligent code suggestions and transformations.
 - Integrated Firebase Authentication and real-time data storage for secure user workflows.
-

Education:

Master of Computer Applications (MCA) | Pune, India

Jul 2022 – Jun 2024

Institute of Management and Career Courses (IMCC), Pune | CGPA: 8.46

Bachelor of Computer Science (BCS) | Sangli, India

Jul 2019 – Jul 2022

Willingdon College, Sangli | CGPA: 9.15

Certifications:

- [HackerRank Java \(5★\)](#), [Java Certification](#), [Problem Solving \(Intermediate\)](#)
 - [SQL \(Basics & Intermediate\)](#), [Python Programming Certification](#)
 - [Ethical Hacking & Cyber Security](#)
-

Technical Skills:

- Languages: Java, JavaScript, Python, PHP, SQL
- Frameworks: React, Next.js, Node.js, Express.js
- Security: Authentication, Authorization, OAuth 2.0, OIDC, SAML, IAM, SSO, JWT
- Databases/Cloud: PostgreSQL, MySQL, MongoDB, Firebase, Redis, AWS (Lambda, SQS), RabbitMQ
- Tools: Git, Docker, Maven, npm, Composer
